

# IT Analyst & Developer OneSumx

**Lux-Advisory** is a company specialized in project management. Our consultants take part in European or International projects. To support the increase of our activities, we are currently looking for an **IT Analyst & Developer OneSumx consultant**.

In accordance with the quality and security procedures currently in place within the IT Banking Services department, the Analyst & Developer assists in the specification, design, coding, testing and releases of technical solutions that meet the business needs.

## Mission

The candidate will have the following responsibilities:

- Generation of regulatory reporting
- Ensure application support
- Planned and applied new release of OneSumX with the vendor and Finance department
- Participate to technical system evolution
- Collect and understand the business issues and needs
- Translate the business requirements (BRD) into functional specifications (FRD) which include system design elements and detailed test plans for the proposed solution
- Ensure the traceability of requirements between BRD / FRD / tests plans
- Code the assigned requirements according to applicable coding standards
- Write associated technical documentation/user manual
- Maintain the documentation and source repository up to date
- Design and execute the test scenarios and test scripts
- Manage change requests related to the project plans to ensure agreed deadlines are maintained.
- Prepare release packages
- On a weekly basis, provide effective and informative progress evaluations in terms of outstanding milestones, current status, resource requirements, issues, risks and dependencies
- Assist in realisation of project deadlines and schedules
- Communicate effectively and facilitate team interaction
- Lead internal teams and mentor those with less experience
- Suggest areas for improvement in internal processes along with possible solutions
- Ensure that the appropriate documentation is made available for the end user and IT Support
- Guarantee use of standards and procedures to ensure CMMI3 certification

## Skills

The Consultant will have the following profile:

- Education: Degree in IT
- Professional Experience: Proven record of analysing and documenting medium to large projects, with a minimum of two years related experience, and proven record in specification writing and software development

Behavioural Skills:

- Ability to collaborate / Teamwork
- Organizational skills
- Communication skills - oral & written
- Proactivity
- Transversal Skills: Analytical Ability

Technical Skills:

- Knowledge of OneSumx(Fire) are mandatory
